

Homework Assignment 2

Deadline: Sat. May 20th, 23:59

- Please upload your submissions as zip or pdf files to Jira
-
1. Can increasing the memory (RAM) capacity of a PC improve its performance speed? How?
 2. What is a device driver?
 3. What is DirectX? Why/when should a program choose to use it?
 4. What is CUDA? How (in a technical sense and a usability sense) can your program utilize its capabilities?
 5. What is boot priority? How and why would one modify the boot priority of the devices in a PC?
